Serial Number: 501 Name:

ECE 3300 Fall 2016 (Signals, Systems, and Transforms): Exam V

Record your name on this test; record your name, student ID, and test serial number on the scantron. Enter the test serial number in COURSE; you may leave SECTION blank. You must show your work on every problem, showing all steps on your test. Do not use scratch paper or write your work anywhere but on the test. Circle your answers on the test and bubble in the corresponding answers on your scantron. The examination lasts 60 minutes and you may use five sheets of notes (front and back); no old test questions can be on your notes. Calculator use is permitted. There is one correct answer per question. In problems asking to find coefficients A, B, C, etc., some of these coefficients may equal zero.

Question 1: Suppose x[n] has Z transform $X(z) = \frac{1}{(1 - \frac{1}{2}z^{-1})^3(1 - 3z^{-1})^3}$ with ROC $\frac{1}{2} < |z| < 3$. Suppose y[n] = x[n] + x[-n]. Determine the ROC for y[n]. You do not need to determine Y(z).

- A: 2 < |z| < 3.
- $B: \frac{1}{3} < |z| < 3.$
- $C: \frac{1}{2} < |z| < 2.$
- $D: \frac{1}{2} < |z| < 3.$
- $E: \frac{1}{3} < |z| < 2.$

Question 2: Suppose $x[n] = (-\frac{1}{3})^n u[-n-1] + (-\frac{2}{3})^n u[-n-1]$. Determine the ROC for X(z).

- A: $-\frac{1}{3} < |z| < \frac{1}{3}$.
- $B: |z| < -\frac{1}{3}.$
- $C: |z| < \frac{2}{3}.$
- D: $|z| < \frac{1}{3}$. E: $|z| < -\frac{2}{3}$.

Question 3: The signal $x(t) = J_0(t)u(t)$ has Laplace transform $X(s) = \frac{1}{\sqrt{1+s^2}}$ with ROC Re $\{s\} > 0$. (The signal is a Bessel function but you don't need to know anything about Bessel functions to solve this problem.) Determine the inverse Laplace transform of $Y(s) = \frac{e^{-2s}}{\sqrt{1+(s+1)^2}}$ with ROC Re $\{s\} > -1$. The answer has the form $x(t) = e^{A(t-B)}J_0(t-C)u(t-D)$. What is

A+B+C+D? Choose the closest answer. Hint: First determine the inverse Laplace transform of $\frac{1}{\sqrt{1+(s+1)^2}}$.

- A: 5.
- B: 4.
- C: 2.
- D: 1.
- E: 3.

Question 4: Suppose a signal x[n] has Z transform $X(z) = \frac{z}{z^3-1}$. Suppose y[n] = nx[n]. Determine Y(z). The answer has the form $\frac{A(z)^B + C(z)^D}{(z^3-1)^2}$. What is A + B + C + D? Choose the closest answer. You do not need to determine the ROC.

- A: 2.
- B: 8.
- C: 6.
- D: 10.
- E: 4.

Question 5: Suppose x(t) has Laplace transform $X(s) = \frac{s+1}{s^2-4s+5}$ with ROC Re $\{s\} > 2$. Determine the Laplace transform of $e^{-t}x(t)$ including the ROC. The transform has the form $\frac{As+B}{s^2+Cs+D}$ and the ROC has the form Re $\{s\} > E$. What is A+B+C+D+E? Choose the closest answer.

- A: 5.
- B: 2.
- C: 1.
- D: 3.
- E: 4.

Question 6: Suppose $X(z) = \frac{1}{1+z^{-1}} + \frac{2}{1+2z^{-1}} + \frac{3}{1-z^{-1}} + \frac{4}{1-2z^{-1}}$. If the ROC is 1 < |z| < 2, determine x[n]. The answer has the form $A(B)^n u[n] + C(D)^n u[n] + E(F)^n u[-n-1] + G(H)^n u[-n-1]$. What is A + B + C + D + E + F + G + H? Choose the closest answer.

- A: -3.
- B: -1.
- C: -4.
- D: 0.
- E: -2.

Question 7: Suppose $X(z) = \frac{3-z^{-1}}{(1-\frac{1}{2}z^{-1})^2}$ with ROC $|z| > \frac{1}{2}$. It follows that $x[n] = (An+B)(\frac{1}{2})^n u[n]$. Determine B. Choose the closest answer. Hint: Note that $x[n] = (A(n+1) + (B-A))(\frac{1}{2})^n u[n]$.

- A: 2.
- B: 5.
- C: 1.
- D: 3. E: 4.

Question 8: Suppose $X(s) = \frac{4(s+2)^3}{(s+1)(s+3)^2}$ with ROC Re $\{s\} > -1$. It follows that $x(t) = A\delta(t) + Be^{-t}u(t) + (C + Dt)e^{-3t}u(t)$. What is C? Choose the closest answer.

- A: -3.
- B: -4.
- C: -2.
- D: -5.
- E: -1.

Question 9: Suppose the signal x[n] has Z transform $X(z) = \frac{(\frac{3}{2} + z^{-1})^2}{(\frac{5}{4} - \frac{1}{2}z^{-1})^3}$. with ROC $|z| > \frac{2}{5}$. Suppose $y[n] = \sum_{m=-\infty}^n x[m]$. Determine Y(z). What is Y(2)? Choose the closest answer. You do not need to determine the ROC in this problem.

- *A*: 10.
- B: 9.
- C: 8.
- D: 7.
- E: 6.

Question 10: Suppose $x[n] = (-2)^n u[-n-1] + (-1)^n u[-n-1]$. Which statement is correct?

- A: The Z transform exists but the Fourier transform does not.
- B: The Z and Fourier transforms exist but $X(e^{j\omega})$ can not be found by substituting $z=e^{j\omega}$ in X(z).
- C: The Z and Fourier transforms exist and $X(e^{j\omega})$ can be found by substituting $z=e^{j\omega}$ in X(z).
- D: The Fourier transform exists but the Z transform does not.
- E: Neither the Z transform nor the Fourier transform exists.

Question 11: Suppose $x(t) = e^{-t}\cos(2t)u(t) - 3e^{-t}\sin(2t)u(t)$. Determine X(s). The answer has the form $\frac{A+Bs}{s^2+Cs+D}$. Determine A+B+C+D. Choose the closest answer. You do not need to determine the ROC.

- *A*: 1.
- B: 3.
- C: 4.
- D: 2.
- E: 5.

Question 12: Suppose $X(z) = \frac{1 - \frac{1}{3}z^{-1}}{1 - \frac{2}{3}z^{-1} + \frac{4}{9}z^{-2}}$ with ROC $|z| > \frac{2}{3}$. Determine x[n]. The answer has the form $a^n(A\cos(bn) + B\sin(bn))u[n]$ where $0 < b < \pi$. What is $a\sin(b)$? Choose the closest answer.

- A: 1/3.
- B: $\sqrt{2}/3$.
- $C: \sqrt{5}/3.$
- D: 2/3.
- E: $\sqrt{3}/3$.
